CONFERENCE PROGRAMME

The conference programme focuses on the quality, safety and security of electronics. The following topics will be addressed in different workshops and programme sessions running in parallel:

- Organisational aspects, infrastructure and process management, process assessments as well as safety and security audits.
- Management and organisational aspects of quality, functional safety and security in the context of international and industry specific standards and legal frameworks.
- Functional safety methodology, safety concepts and safety analysis and the implementation and interpretation of ISO 26262. Quality measures, process or risk assessments and hazard analysis techniques for software-based embedded systems.
- Challenges for quality, safety and security management regarding automated and connected driving.
- Ways for both hardware and software to avoid vulnerability of software-based systems in the vehicle.
- Presentations on typical security threats for mobile embedded applications as well as fundamental security methodologies and technologies.

Highlights of this Year's Conference

- Dedicated session on legal and ethical frameworks in the context of automated driving
- Workshop and presentations on testing future vehicle software functions
- Presentations on the safety of the intended functionality (SOTIF)
- Dedicated session on automated driving and advanced driver assistance systems (ADAS)
- Dedicated session on the most recent changes in standard development for Automotive SPICE, safety and security
- Session on software quality assurance for agile development
- and many, many more

HOTEL INFORMATION

Landgut Stober

Behnitzer Dorfstraße 27-31
